

Success Story

Red.es

How Red.es was able to provide all of its web portals with the latest in web accessibility and usability features

What they needed

For Red.es it was of primordial importance to provide a website that was **100% accessible**, given **its position as a model and leading business in the field of digital transformation**, spearheading the movement towards digitalisation in Spain for the **public sector**.

Not only did they need to ensure accessibility **without rebuilding their web portal**, for the costs that this would involve, but it was also important to ensure that the website featured the latest trends, discoveries and **state of the art in web accessibility**.

This project involved a number of **web portals**: red.es, dominios.es, ontsi.red.es, sede.red.gob.es, licitacion.red.es, perfilcontratante.red.es, datos.gob.es, and eventos.red.es.

Each website was a unique entity, which increased complexity and difficulty in achieving uniform accessibility across all the **websites that made up its online presence**.

Salient characteristics of the Red.es web platform (main domain):

Content management:

Drupal

Monthly accessible visits:

3000 +

JavaScript Libraries:

jQuery,
Angular JS

How this was solved by inSuit

In addition to the **power and simplicity of inSuit**, Red.es chose this solution because it was aligned with the company's commitment to innovation and technology developed in Spain.

inSuit was implemented on all of its web portals in keeping with the plans and timelines established by Red.es, with each website enjoying **robust and reliable web accessibility** adapted to their users' needs.

The result

Today, **thousands of users with disabilities** or difficulties in accessing the Internet now use inSuit each month to browse and access all of the **Red.es web portals**.

This gives them full, **usable access** to information and services offered by Red.es while strengthening their role as promoter of digitalisation in Spain.
