

Success Story

Regional Government of Murcia

How the Regional Government of Murcia made its web portals accessible in less than four weeks

What they needed

One of the Government of Murcia's commitments was to make all of the services it **offers on its web portals accessible** to all its citizens.

In total there were more than **40 web portals**, all using different technologies, making it an **ambitious and wide-reaching project**. When they learned about the inSuit platform, they felt it was the **best, quickest and most integrated** method of meeting this objective.

Salient characteristics of the Government of Murcia web platform (main domain):

Content management:

Own, Google Search Appliance

Monthly accessible visits:

4,000 +

JavaScript Libraries:

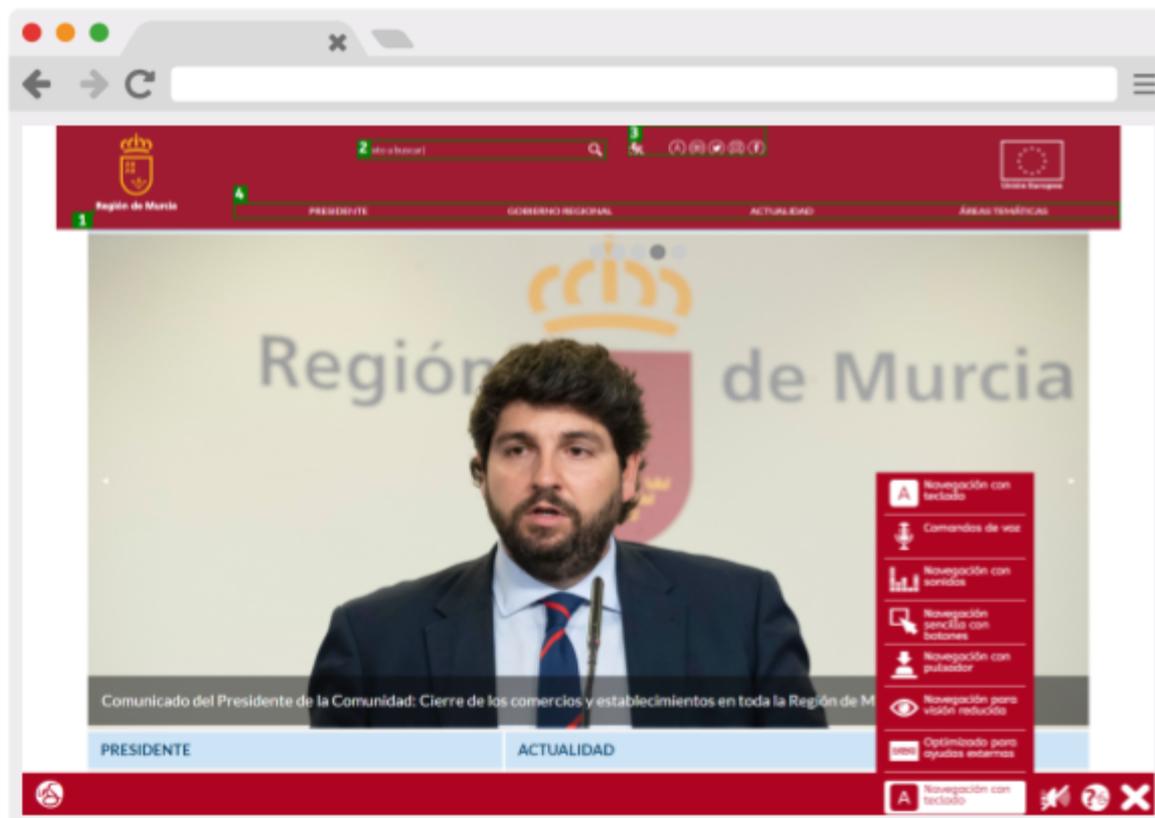

jQuery, Modernizr

How this was solved by inSuit

Given the complexity and scope of this project, inSuit implementation was prioritised in **two different phases**. Accessibility was implemented in the web portals having the **highest priority** (Phase 1) in **less than four weeks**, and the remainder (Phase 2) in a further three weeks.

The Regional Government of Murcia considered the implementation of inSuit a **resounding success** as all of its web portals, which used various technologies, templates, etc., were made accessible in **record time**.

The **President of the Region of Murcia** announced the results of the project before the media and representatives of numerous disabled persons' organisations, showing the **impressive results** of the inSuit implementation across its web portals.

The result

Today, **thousands of citizens** access the services they need on the various Government of Murcia websites, using the **accessibility** tools of the inSuit platform, in a manner **adapted** to their needs.

The platform has shown that it is **fully effective** for the entire range of web portals offered by the Government of Murcia, allowing **access** to information, playing of **multimedia content** and fulfilment of online **transactions**.

“In our experience, the inSuit technology is a powerful and innovative accessibility solution which is also reliable and robust.””
